

AQUASTOP NATURA

water repellent for stones, concrete, bricks, plasters

Line

NATURA

Function

It develops quickly an effective water repellent barrier - UV rays stable - protective - transpiring - on the mineral stone supports even when humid.

The active substance of the product has:

-Good penetrating capacity; the treated material is well protected also in depth.

-High resistance to alkaline environments; the product is suitable for all kind of concrete and, in general, for most materials commonly used by the building industry.

Materials

CONCRETE (all kind commonly used),

MINERAL PLASTERS,

FIBRE-CONCRETE PANELS,

SILICEOUS-CALCAREOUS SIGHT-BRICKS,

MINERAL BASED NATURAL AND ARTIFICIAL STONES

DO NOT USE THE PRODUCT TO WATERPROOF GYPSIFEROUS SUBSTANCES

How to use

For wide surfaces the more suitable application system is by using low pressure supply devices.

The product can be applied also by paint-brush or roller (in proximity of doors, windows or smaller surfaces) or by soaked white cotton cloth (for difficult points, restorations).

Apply also more coats till the pores of the materials are impregnated (anyway avoid any stagnation and drying of excess of product on the surface).

In general two applications are enough for most materials.

Effectiveness and duration of the waterproofing effect depend on the depth of the penetration of the product.

Drying time outdoor ventilated environment: 15-30 minutes according to the temperature and ambient conditions.

After drying the support recovers its original colour and keep unchanged its transpiration capacity.

The water repellent effect is totally developed 24 hours after the application.

After the impregnation by AQUASTOP NATURA it's no more possible the application of water paints. Painting must be effected before the application of AQUASTOP NATURA and by using inorganic paintings (e.g. silicate painting).

Packaging

5-10-25 l

Characteristics

Mix of siloxanes and water

Important

Do not apply:□

-in areas subject to water under pressure (basements, ditches, swimming pool ends),□

-on surfaces of gypsum or synthetic material (plastics, synthetic plasters or synthetic paints),□

-in case of adverse atmospheric conditions (temperatures lower than 5°C [41°F] or higher than 35°C [95°F]; when outdoor in case of coming rain, over ventilation, etc.) □

Product in aqueous emulsion; no special precautions are required.□

It is anyway suggested to wear impermeable gloves and the compliance with the standard hygiene rules.□

For more information about safety, consult the label and the material safety data sheet.□

The product is an aqueous emulsion: CANNOT STAND THE FROST□

Never store at temperature lower than 0°C (32°F) and avoid to store at temperatures higher than 35°C (95°F); keep sheltered from direct sunrays and heat sources.□

Complied with these rules the product, always kept into closed original containers, has a stability of 12 months.□

After this period the product can be effective, but must be tested for the requested purpose.□

A PRELIMINARY TEST IN A SMALL, HIDDEN, AREA IS RECOMMENDED BEFORE THE FINAL APPLICATION□
