ANTICANTE, RAVVIVANTE A BASE ACQUOSA PER MARMI E PIETRE NATURALI

Line

NATURA

Function

Revives, strengthens and waterproofs the treated surfaces and creates a warm and stable shade on all the polychrome marbles and natural stones bringing out the natural veins

Materials

Absorbing materials. Particularly suitable for polychrome marbles, it is also suitable for any kind of porous and coloured natural stones not polished.

How to use

The surfaces must be clean, dry (or slightly humid, too), free from any kind of alien substance and friable parts. Apply with a clean cotton cloth or paint-brush or tampon. Wait the product penetrates into the porosity of the material and then rub to favour the even absorption and to avoid the accumulating on the surface of unabsorbed product. After some minutes, but anyway before the eventual excess dries on the surface, in order to intensify the required affect a further coat "wet-on-wet" can be applied.
A preliminary test in a small part of the surface is always recommended to evaluate, after drying, the obtained effect and the compatibility of the product with the material.
The protecting and strengthening effect is completely developed after 24 hours from the application.
Do not apply in case of forthcoming rain to avoid the runoff of the product not yet cured

Packaging

LT.1- 5- 10

Characteristics

DRYING TIME : 10 - 30 minutes (according to the environmental conditions)
ESTIMATED CONSUMPTION: 150 - 400 g/m² (according to the material porosity
